

Track your Energy

Measure, evaluate and manage the use of vital resources such as electricity, natural gas, air and water with Fornax's production tracking platform Carbovisor. Identify your environmental footprint and minimize your negative environmental impacts by developing mitigating strategies.

Data Collection

Make data-driven decisions by easily centralizing all emission-causing data on our platform.

Emission Measurement

Measure your Carbon Footprint against international standards and accurately analyze your scope 1, 2 and 3 emissions.

Reporting

Data with our Advanced Reporting module Turn it into actionable insights with a click of a button.

Mitigation Strategies

Develop effective strategies to reduce your emissions.

Every company's environmental needs are different. With our special solutions for your company; Scope 1, Scope 2 and Scope 3 Measuring your emissions is now very easy.

Lead the environmental transformation of your industry with Carbovisor and leave a more livable world to future generations.

Many countries today have laws and regulations regarding carbon emissions. Calculating the carbon footprint is essential to comply with these regulations and avoid potential penalties. Sustainability reports and SKDM statements are very important at this stage.

While publicly traded companies include their emissions in their annual reports, exporting companies are obliged to calculate their emissions quarterly.

According to the new tax regulations published by the European Union, it will determine the tax amounts for carbon emissions occurring during the production of products. Companies need to calculate their emissions in order not to lose market share and to produce cost-effectively.

Carbon footprint plays a critical role in achieving sustainability goals and transitioning to a low-carbon future. Companies can take an active role in the fight against climate change with strategies to reduce their carbon footprint and benefit from green financing resources.

SKDM is an important part of the European Union's efforts to combat climate change. Within the scope of this system, exporting companies are required to report the carbon emissions of their products every three months. These reports include various details, from emission calculations to production processes, from raw material purchases to emission allowances per unit.

Carbovisor carries out this process in a Turkish-supported, easy-to-use, fast and automatic way. SKDM allows you to make declaration transactions easily and quickly.

You can contact us for detailed information and opinions about the sustainability platform.
